
Whether the data is 4K video, satellite images, CAD drawings, film industry dailies, office documents, DNA sequence data, or corporate reports, its long-term value lies in persistent availability to be analyzed, monetized, or otherwise reused in the future—not just when it’s collected. With advances in technology and analysis tools, the sheer volume of data can be overwhelming. Existing storage technologies are being stressed beyond their current capabilities to maintain this data long-term while enabling the efficient and immediate access required to extract its maximum value. Lattus™ meets these challenges by leveraging Object Storage technology to extend online storage and provide immediate data access with unmatched levels of scalability, durability, and cost effectiveness.

SCALES TO HUNDREDs OF PETABYTES WITHOUT DISRUPTION OR DATA MIGRATION

Quantum’s flexible durability policies enable configuration changes to add more storage or even to expand from single-site to multi-site configurations without disruptive data migration. Data will automatically be re-spread, as a background process, to accommodate the new configuration. Upgrading to new storage technologies is as simple as adding new storage nodes—Lattus redistributes the data seamlessly with no user impact. Disruptive technology refresh and data migration cycles are now a thing of the past.

DURABLE, SELF-HEALING PROTECTION

Lattus error correction algorithms provide extreme durability to ensure data is protected in the event of device failure and even site disaster. Lattus is self-healing—it continuously checks stored data for bit errors and corrects them on the fly. When drives or nodes fail or additional capacity is added, these algorithms redistribute data objects to make full use of the new storage capacity without disrupting access to data.

REDUCES CAPITAL AND OPERATING COSTS

The extreme durability of its algorithms protect every instance of data against component failure, and when Lattus is spread across multiple sites it also protects against site disaster. Therefore, replication is no longer needed, and demand for backup and DR storage is substantially reduced along with capital and operating expenses. Lattus’ high level of redundancy eliminates the need for most unscheduled maintenance, so unlike RAID-based storage, drive failures do not require immediate operator attention for replacement.

HIGH PERFORMANCE, LOW LATENCY ACCESS

Quantum’s appliance-based strategy enables Lattus to deliver predictable performance. High-speed access to data is available through Quantum file system technologies, including NAS access, StorNext® Storage Manager Integration, and native HTTP REST. Our 20-node base system can deliver 3GB per second throughput (subject to network bandwidth) and can scale up from there. This level of performance makes Lattus ideal for environments that need fast access to their content store.

FLEXIBLE AND EASY TO DEPLOY

Lattus has multiple base configurations to choose from—each with specific interfaces and capacity. From there, any interface option can be further added, and capacity and performance can be scaled independently. Dispersion algorithms can be tuned to spread the data across multiple sites to improve accessibility and availability.

FEATURES & BENEFITS

Extreme scalability
Scales from a hundred terabytes to hundreds of petabytes

High-speed access
Low latency of disk storage yields predictably fast retrieval times

Durable with self-healing
Offers extreme durability to ensure data is protected and virtually eliminate unscheduled maintenance.

Multi-geo support
Data may be spread across multiple, geographically dispersed sites more efficiently than competing solutions

Self-migrating
Innovative algorithms simplify upgrades to new storage technologies. Disruptive technology refresh and data migration cycles are now a thing of the past.

Heterogeneous access
Lattus Native Access is based on Amazon S3 API set. CIFS/NFS, SAN, Distributed LAN Client access provided by StorNext on Xcellis™ and CIFS/NFS via Artico™.

Lower operational resources
Schedule drive replacements periodically versus immediately when they fail. Lower-power drives require less power and cooling.

LATTUS M: WITH STORNEXT INTEGRATION
Ideal for large-scale environments that include multiple tiers of storage, from primary storage to active archiving to tape. Lattus-M extends StorNext File System environments by migrating files targeted for archive from primary storage to Lattus, while allowing users to retain access directly from the StorNext File System.

LATTUS-D: CLOUD STORAGE FOR DATA PROTECTION
Its native HTTP REST interface is a perfect complement for software applications that want to leverage the power of cloud storage for low-latency, nearline access and long-term retention of unstructured data. By offloading unstructured data from primary storage to Lattus, backup applications no longer need to include that data in the backup process. This improves the efficiency of primary storage and reduces time and network load associated with backup operations. Lattus-D can also be paired with Artico for an easy NAS solution backed by Lattus Object Storage.

LATTUS STARTING CONFIGURATIONS

LATTUS SCALE-OUT ARCHITECTURE
C5 and C10 Controller Nodes
- Encodes data into objects and disperses them to the storage nodes
- Provides data access via HTTP REST
- 1U chassis

S30 and S50 Storage Nodes
- Extembles data/content storage
- Low power & cooling requirements
- 12 drives per node, with 7.2TB (S30) and 12TB (S50) raw capacity per node
- Self-healing, Checksums for data integrity and repairs bit errors
- High density: Up to 120TB in 1U chassis

Artico
- CIFS and NFS file system access
- 1.4 billion files on an Artico
- Can also attach to tape and public cloud
- 6U chassis
- 32 or 73TB usable cache

Xcellis
- SAN, DHC, CIFS and NFS file system access
- 1.4 billion files on Xcellis
- Can also attach to tape and public cloud
- Flexible performance and scale of cache

MEMORIAL CAPACITY
6-node base: 2GBH Raw / 2.0PB usable with 1x4 durability policy
20-node base: 4.6PB Raw (1TPH usable with 2x4 durability policy)

EXTERNAL INTERFACE
2 x 10GBE SFP+ ports per Lattus Controller Node

SECURITY
HTTPS, encryption-at-rest. StorNext in Artico and Xcellis provide Active Directory Access.

MANAGEMENT AND REPORTING
Web-based management and reporting. automated email alerts, SNMP

REUNDANCY
Controllers, switches, power supplies and cabling on every node. Fountainhead feature on Lattus Object Storage

ADDITIONAL COMPONENTS TO SCALE CAPACITY, PERFORMANCE & ACCESS
Lattus C70 Controller Nodes (1U) | Lattus C8 Controller Nodes (1U) | Lattus S30 or S50 Storage Nodes (1U) | Lattus M Feature Keys for S30 or S50 Storage Nodes | Lattus 555 Rack Switches (1U) | Lattus 560 Rack Switches (1U) | Lattus System Switches (1U) | Lattus IntraSwitch Connect Switches (1U) | Lattus

BASE SYSTEM RATED CURRENT
6-node base: 110 amps @ 220V
20-node base: 220 amps @ 220V

BASE SYSTEM MAX POWER
6-node base: 2508 Watts
20-node base: 5144 Watts

BASE SYSTEM NOMINAL POWER
6-node base: 2139 Watts
20-node base: 4201 Watts

INPUT VOLTAGE
203 to 240VAC, 50 to 60Hz
